

## **MICROBRITE TOOTH POWDER**

*Microbrite Tooth Powder* is an electron rich powder that neutralizes all positively charged food particles on your teeth. This causes the food to no longer want to adhere to your teeth. As your brush your teeth these electrically neutral food particles come off more easily. The net result is that your teeth become very clean. They feel like they have been polished clean. As you pass your tongue over your teeth you can feel the extremely clean and smooth surface. This type of cleaning insures that no bacteria can feed on your teeth and produce acids that erode your enamal. Therefore Microbrite is truly a profound oral hygeine product. One brushing can make your teeth feel clean for 24 hours.

It also feeds the gums electrons to improve gum health. It may help eliminate the infection at the gum lining of people with gum infections. It cleans and whitens the teeth better than any dental hygiene cleaning agent. It is amazing stuff. Two brushings per day combined with flossing and water picking will keep your mouth the cleanest and sweetest it's ever been. By doing this you will be keeping the mouth clean of excess bacterial presence, keeping the acids down and dramatically supporting the overall healing of the gums and teeth. Yes teeth and gums can heal. I've done it. And helped my clients do it.

I have taken my teeth that have started to get sensitive due to the beginning of a cavity and have reversed it. As an essential foundation to dental or any health challenge you must adhere to a diet free of soda pop, white sugar or overly refined foods. You must eat healthy!

If you are trying to reverse bone loss, tooth decay and gum recession then you will need to add the following supplements to your program. Nano-Cal (1-2scoops 2x per day 30 minutes before breakfast & dinner), Intra-Cal (1cap 3x per day with meals), Ubiquinol (1cap 3x per day with meals), Synergy K (1-2cap 2x per day with meals) Vitamin D3 10,000 IU (1cap 1x per day with food) and Synergy One (3sprays at bedtime and upon arising). With this combination of products and a good diet clients have reversed gum recession. You must also stop using fluoride found in most toothpaste and remove it from your water as well. Fluoride is a carcinogen, neuro toxin and it weakens and makes brittle the teeth and bones. The story about fluoride can be learned in the book "The Fluoride Deception".
